

## Creating Forms with Multiple Pages

You can differentiate instruction by using Google forms with multiple pages. By utilizing the, “go to page based on answer,” feature, students can be given different questions based on how they answer. For instance, if a student answers incorrectly, they can be taken to a review video and be given the chance to answer the question again. Or, if the student answers correctly, they can be sent to a more difficult question.

These types of forms can be used for openers, closers, peer evaluations, reviews or assignments.

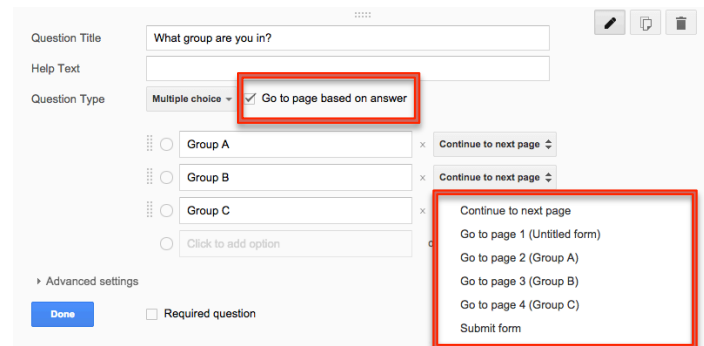

### The first step is to create all your pages.

- Click on **Add item** (at the bottom of the page) and then chose **Page break** or click on **Insert, Page break**
- Change the page title. It is recommended that you change the page name based on contents of the page.
- Continue this process to make more pages

### Adding questions

1. Click on Add item or from the **Insert** menu, select either **Multiple Choice** or **Choose from a list**. (Note: Only these two question types can be used to direct respondents to specific pages. No other question type can.)
2. Check the box labeled **Go to page based on answer**.
3. Next to your answers for this question, you'll see drop-down menus, which allow you to direct students to specific pages in your form depending on their answers.
4. You can also choose to send respondents to the confirmation page based on an answer by selecting **Submit form** from the drop-down menu.

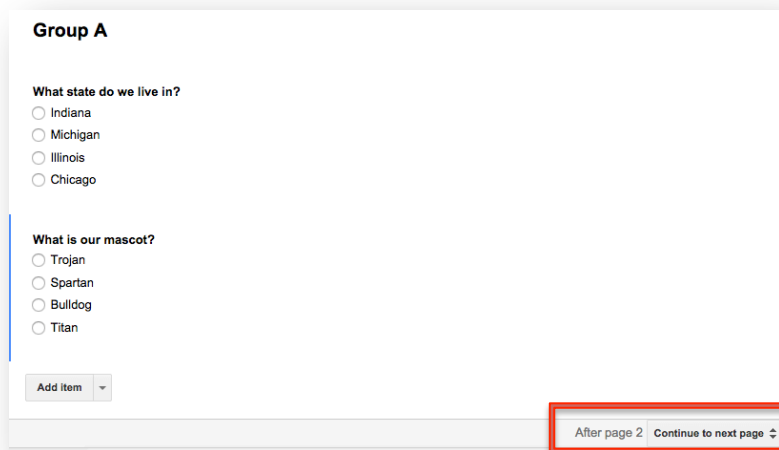

## Sending users from one page to another page.

You can either send students to a different page based on their answer, or you can send them to another page based on the current page. For example, they answer question one and they are sent to page two. Page two has several questions on it. When they are finished with page two, you want them to skip to page 4.

At the end of each page in your form, you'll see a dropdown menu with options for where to send respondents next. By default, it's set to "Continue to next page," but you can change it to send respondents to a specific page in your form or to the form's confirmation page. (Note: If a page has a "Go to page based on answer" multiple choice question on it, the respondent's answer to that question will override any page navigation settings you've chosen.)

When you create the form, you have the same options as you did for individual questions, including Submit form.

The screenshot shows a form editor interface for a page titled "Group A". It contains two multiple-choice questions:

- What state do we live in?**
  - Indiana
  - Michigan
  - Illinois
  - Chicago
- What is our mascot?**
  - Trojan
  - Spartan
  - Bulldog
  - Titan

Below the questions is an "Add Item" button. At the bottom right, a dropdown menu is highlighted with a red box, showing the text "After page 2" and the selected option "Continue to next page" with a downward arrow.
